Sugar Annual

Planting Intentions Indicate Record Beet Production in 2011

Approved By:

Morgan Haas

Prepared By:

Morgan Haas, Mikhail Maksimenko, Stephen Therrien

Report Highlights:

Russian sugar beet production is expected to rebound strongly in 2011 and effectively displace a significant portion of raw sugar imports in 2011/12. GOR subsidies and normal weather conditions should allow industry to ultimately increase harvested area and production to 1.2 million hectares (24 percent over 2010) and 30 MMT (40 percent over 2010), respectively. In response, FAS-Moscow expects Russia to slash raw sugar imports to just over 1.7 MMT. At the same time, Belarus is likely to sustain shipments of refined sugar in order to support a 275,000-MT Russian import forecast. In the meantime, price relief cannot come soon enough to Russia's depleted sugar market.

Summary

Russian sugar beet production is expected to rebound strongly in 2011 and effectively displace a significant portion of raw sugar imports in 2011/12. GOR subsidies and normal weather conditions should allow industry to ultimately increase harvested area and production to 1.2 million hectares (24 percent over 2010) and 30 MMT (40 percent over 2010), respectively. In response, FAS-Moscow expects Russia to slash raw sugar imports to just over 1.7 MMT. At the same time, Belarus is likely to sustain shipments of refined sugar in order to support a 275,000-MT Russian import forecast.

As the vast majority of sugar beet refining nears its finish midway through 2010/11, poor results have continued to bolster import demand and price growth beyond earlier expectations.

*New crop beet sugar production in August and September assumed to occur in October for PSD calculation.

Production

Sugar Beets

Russia will increase the 2011 planted area of sugar beets to a record 1.2 million hectares (3.0 percent growth). Considering a return to normal weather conditions, sugar beet production of 30 MMT (40 percent growth) is thus expected for MY 2011/12.

While the total area devoted to sugar beet production in 2010 increased 10 percent to 1.16 million hectares, the summer drought led to massive losses and decreased yields. Government officials reported the drought impacted 17 out of the 26 sugar beet regions in Russia, and beets were killed or heavily damaged in 250,000 hectares, which resulted in a failure of planned import substitution. According to Sugar Beet magazine (#2, 2011) sugar beet producers lost 2.7 MMT of sugar beets in 2010 valued at RUR4.3 billion.

Sugar beet production is concentrated in the Central and Southern Federal districts. Roughly 90 percent of sugar beets are grown by large agricultural enterprises and farms that belong to refineries. The balance is grown by small farms and private households.

In Russia, sugar beets are planted in April/May and harvested in September through November.

State Support for Development

In the framework of the federal target Program for the Development of Sugar Production, 2010-2012, sugar beet producers will receive support for beet seed production and partial compensation for expenses in order to improve profits for sugar production vis-à-vis other crops. Prior to the program's implementation, profitability of beet producers had already grown from 4.7 percent in 2007 to 25.7 percent in 2009.

The Ministry of Agriculture reports increasing prices for agrochemicals, fertilizers, fuel and electricity increase sugar beet production expenses. The federal target Program provides sugar beet producers compensation for the purchase of fertilizers and plant protection chemicals.

The Russian sugar beet industry considers the absence of facilities for treating beet seeds as a bottleneck to attaining self-sufficiency. With funding from the federal target Program, "Betagran Ramon" seed treating plant is currently under construction in Voronezh oblast and will produce 20 percent of coated beet seeds needed for Russian beet breeders. The facility will source seeds for treatment from Astrakhan oblast and Italy. A similar plant will be built in Lipetsk oblast. (Sakharnaya Svekla, #10, 2010).

Russia prohibits the cultivation of biotech plants.

Refined Sugar

Assuming Russia misses its sugar extraction target of 13.58 percent and falls in line with its historical average (12.8 percent), this would result in 3.8 MMT of beet sugar (4.2 MMT raw value) in MY 2011/12.

According to the Russian State Statistical Service (Rosstat), total refined sugar production in MY 2009/10 totaled 5.1 MMT (5.6 MMT raw value). However, two considerations must be taken into mind when considering this number.

- Production of refined sugar from sugar beets in August and September are considered to have occurred in October for calculation of the marketing year.
- Production of refined sugar from raw cane sugar indicates Russian customs statistics may be currently underreported by approximately 8.5 percent. [Note: Since 2001, Russia's customs service has recorded only 56 percent of Brazil's reported exports of raw cane sugar to Russia.]

Sugar beet stocks from the 2010 harvest were depleted shortly after the beginning of 2011, and the production of refined sugar from raw cane sugar is likely to jump in the coming months as imports work to offset this year's short supply of domestic beet sugar.

Figure 1. Russia: Refined Sugar Production, Thousand MT

Source: Rosstat

State Support for Development

Almost half of the sugar processing plants in Russia were built before 1917, and none have been built in the last 25 years. Sixty percent of processing equipment is worn out.

In order to renovate the industry, the Ministry of Agriculture approved subsidies for the reconstruction and modernization of 18 refineries. Russia also plans to build five new refineries. Two of them are already under construction and the necessary papers have been prepared for the remainder. Six billion rubles (\$200 million) will be invested in the construction of a new plant with a daily processing capacity of 9,000 MT of beets in Tambov oblast.

To implement the above projects, the Russian Union of Sugar Producers reported investments in the sugar beet production industry will grow from RUR14 billion (\$460 million) in 2010 to RUR14.7 billion (\$490 million) in 2011 and RUR15.8 billion (\$526 million) in 2012. The GOR will subsidize a portion of interest for investment credits for this purpose.

Trade

Russia's trade policy remains based on the ideals of import substitution, but it welcomes raw sugar imports to compensate for poor harvests. Russia also continues to expand its cooperation with Belarus in respect to trade in refined sugar.

Raw Sugar Imports

Raw cane sugar imports are likely to fall back considerably with the expectation for a significantly larger beet sugar production in MY 2011/12.

In the remainder of MY 2010/11, raw cane sugar imports should remain strong to help fulfill demand. Brazil controls 80-85 percent of the historic market share for Russia's raw cane sugar imports, while Cuba and Thailand are also active market participants. In light of the particularly short sugar supply in Russia this current year, on January 28, 2011, the Customs Union Commission decided to temporarily lower the import duty for raw sugar from \$140/MT to \$50/MT in the period March 1 to April 30, 2011, when sugar prices on the NYMEX reach \$396.84/MT. The Customs Union also applied lower import duties October 1, 2010.

In December 2009, the Customs Union adopted the seasonal import tariff regime that cuts duties between \$140 to \$270/MT from January 1 to April 30 and August 1 to December 31. Reducing the tariff prompts increased raw sugar shipments to Russia and helps supply the market until beet sugar production begins in the end of August. The GOR decreased duties in a similar manner from May 1 – July 31, 2010, which, at the time, helped to temporarily stabilize retail sugar prices. However, since that time, tariff relief has not been able to alleviate rapid price inflation.

Refined Sugar Imports

Refined sugar imports are also likely to fall back, although to a lesser degree in MY 2011/12. Their relatively smaller role in the Russian sugar market and Russia's ties with Belarus are likely to prevent too deep of an impact.

Belarus

On December 22, 2010, the Russian and Belarusian Ministries of Agriculture agreed to a Common Agricultural Policy of the Russia-Belarus Union State as well as established 2011 import quotas for dairy, meat and poultry, and sugar, in accordance with also agreed Union State food balance sheets. According to the agreement, in CY 2011, Belarus will ship Russia 200,000 MT of refined beet sugar. The shipments will be distributed evenly throughout the year.

According to Rosstat, refined sugar imports from Belarus increased to 180,000 MT as well as exceeded the CY 2010 quota of 150,000 MT agreed to in September 2009.

Ukraine

Ukraine's Prime Minister Azarov has asked Russia's Prime Minister Putin to reconsider an earlier request to establish a 100,000 MT duty-free quota for Ukraine to export refined sugar to Russia. Russia's sugar producers remain opposed to the deal. In accordance with the CIS inter-state agreement, beet sugar originating from Ukraine will become duty-free beginning January 2013.

Consumption

Sugar consumption jumped in 2010 but it is yet uncertain if further growth in the food processing sector will continue at recent rates through MY 2011/12. In 2010, the production of sugar-containing products grew over 10 percent.

According to Business Press newspaper, quoting the International Sugar Company (ISC), Russia's population consumes 1.7 times more sugar than the food processing industry. ISC reported that Russia used 5.5 MMT of sugar in CY 2010, including 1.2 MMT by the rural population, about 1.6 MMT by the urban population, and more than 1.5 MMT of white sugar by the food industry. The balance is unknown. ISC also mentions that according to its estimation, 14 percent of total Russian sugar use is processed in the production of home-made vodka, which accounts for more than 30 percent of all vodka in Russia. About 2.5 percent of sugar is consumed for non-food purposes.

Increased demand, combined with a disastrous 2010 domestic sugar crop, have contributed to a rapid run-up in prices, which has been only moderately softened by occasion lower sugar import duties.

Global Trade Information Services

Stocks

Sugar stocks will be flat in MY 2010/11 and MY 2011/12. According to the Russian Union of Sugar Producers, Russia's sugar stocks were 2.2 MMT on January 1, 2011, or 150,000 MT less than the 2010 volume.

The GOR actively regulates sugar supplies by means of (1) import duties for raw cane sugar and (2) quotas for white beet sugar originating from Belarus.

As an additional measure of sugar market regulation, the GOR plans to sell 300,000 MT of sugar from the state reserves at auction. Sales have not started yet. Sugar market experts believe that these measures will stabilize the sugar market balance, as tight supplies have caused prices to rise steadily since the middle of 2010.
